Agricultural Contracting Program

Thursday, June 26, 2025 · 9 a.m. - Noon

Virtual webinar | Registration required | Free for INFB members, \$50 for nonmembers

Agricultural Contracting – The Basics

Todd Janzen, *Janzen Schroeder Ag Law*

9 - 10 a.m.

Indiana farmers operate in an environment where a contract governs many of their activities. Historically, some have avoided written contracts believing they convey a lack of trust between the parties, while others see value in clearly memorializing a “meeting of the minds” and documenting the duties and responsibilities of the parties to an agreement. Todd will provide useful information regarding the basics of contracting, common terms and conditions and other considerations for farmers and landowners.

Agricultural Contracts

Harrison M. Pittman, *The National Agricultural Law Center*

10 - 11 a.m.

Contracts play a significant role in modern agricultural production. Building on “Contracting – The Basics,” Harrison will discuss different types of agricultural contracts, leases, and related issues and how they impact agriculture. Also, he will highlight Federal contract termination and other discontinued Federal obligations.

Renewable Energy Contracts

Brianna Schroeder, *Janzen Schroeder Ag Law*

11 a.m. - Noon

Renewable energy is a hot topic across Indiana. Landowners looking to diversify their income or to create financial security for future generations may be drawn to solar energy, wind turbines, or carbon sequestration projects. All of these projects start with a contract between the property owner and the renewable energy company. Once a sufficient number of property owners have signed up, the project may move forward with permitting, financing, and development phases. Given the lengthy term and complexity of these contracts, landowners must fully understand the agreements put before them. These proposed contracts can be negotiated, so Indiana families should be ready to discuss their primary concerns and position their land for success now and into the future. Brianna will highlight common terms associated with renewable energy projects.
